

The Lightest Glider in the World

Ozone's new Ultralite is the lightest DHV certified glider in the world!

Ozone have released their Ultralite, an amazing glider at only 2.85kg (size 23). This knocks 1.2kg off the weight of its nearest rival, the Gin Yeti!

The weight is saved in several areas; reducing the overall size of the wing, using very lightweight fabric, unsheathed lines integrated without maillons to the dyneema risers.

Lightweight gliders needed to be treated with more care than a normal weight glider obviously, but the enormous weight and volume savings, especially for the travelling pilot, have to be worthwhile. If money isn't an object, the Ultralite would make a superb travelling or walk-up glider in addition to your normal-weight wing.

Just think about those walk-ups; try this for size - Ultralite 23 + Sup'Air AltiRando Airbag harness + Sup'Air Light reserve + Sup'Air Cockpit Ventral pod + Flytec 5020 = TOTAL WEIGHT OF 8.95kg !!

The Ultralite also is extremely good value for money. To go to our product page with full specs, colours and prices, click [here](#)
